

# A TANGLED WEB

Help the spider weave her web by connecting the dots. Then read some fun facts about spiders below!

- Spiders are not insects. Insects have three body parts and six legs. Spiders have eight legs and two body parts, the abdomen and the thorax.
- There are more than 30,000 species of spiders.
- Most spiders have either six or eight eyes.
- Fear of spiders is called Arachnophobia. It is one of the most common fears among humans.
- Webs get dirty and torn, so lots of spiders make a new one every day. They don't waste the old one, though--they roll it up into a ball and eat it!
